

Corporate Credit

Objective

Our investment objective is to generate an attractive cash distribution in excess of the current rate of inflation and an attractive total return while minimizing the risk of a permanent loss of capital over a complete market cycle. We expect to achieve our objective by investing in corporate bonds when we believe the market price discounts a greater risk of default or a greater loss upon default than is warranted.

Investible Universe

The strategy invests in both investment grade and below-investment-grade corporate bonds, with a bias to defensive high yield corporate bonds (due to lower duration and/or higher credit quality). Under normal circumstances, the strategy will have an effective duration of less than five years.

Investment Process Summary

Research Process Focused on Fundamental Credit Analysis

Our company analysis focuses on the fundamental economic drivers of the business and assesses whether there is adequate financial strength and flexibility to meet ongoing commitments. Avoiding deteriorating situations is critical to delivering consistent results. We evaluate not only the business prospects of the issuer but also whether the current price is attractive relative to risk.

In analyzing the underlying risk/return relationship, we look at the individual bond characteristics such as coupon, tenor, covenants, call schedule, bond rating, and size, which all factor into the price we are willing to pay. We take a position in a security when we have sufficient downside protection and it is priced attractively. We seek to invest in businesses with improving return on invested capital, stable or improving competitive advantages, manageable balance sheets, and outstanding managers and employees.

We also evaluate management's treatment of bondholders and stockholders. We believe management teams that understand the competitive dynamics of their business and employ prudent capital allocation often produce value for bondholders and stockholders.

Security Selection on Strong Theses

After the credit research is complete, the portfolio managers determine whether a security is attractive relative to asset and interest coverage and relative to other securities with comparable risk. We will only own the bonds of a company that we can analyze and value.

Portfolio Construction

Portfolio construction is a bottom-up process with the highest weights assigned to companies where the team has the highest conviction. Familiarity with a company, degree of downside protection, the attractiveness of the price, and analyst conviction shape portfolio construction. The liquidity and expected volatility of a corporate bond are also important factors in portfolio construction. Given our long-term time horizon, we may invest in less liquid or more volatile securities when we receive adequate compensation.

Opportunities may arise out of company-specific dislocations, industry dislocations, or market-wide dislocations. The important point is that we have conviction in our analysis, and we are willing to take advantage of dislocations that result in mispriced bonds.

Our Competitive Advantage

If we don't know a bond well or don't find its price attractive, we will not own it. This common-sense approach is surprisingly uncommon. Our process is disciplined but adaptable:

- Manage independent of benchmark weights
- Liquidity provider rather than a liquidity taker
- Nimble in the secondary market, selective in the new issue market
- High-conviction portfolios
- Long-term investment temperament

At a Glance

- Benchmark: ICE BofAML U.S. Corporate & High Yield Index
- The investment objective for the strategy is to generate income and provide attractive risk-adjusted capital appreciation.
- Our target return is within the range of the average CPI inflation rate plus 3% and 7% nominal, measured over a complete market cycle.
- The strategy invests in both investment grade and below-investment-grade corporate bonds, with a bias to defensive high yield corporate bonds.
- Long-term oriented, benchmark-agnostic investment approach allows the strategy to take positions in those issues that, based on our fundamental research, provide attractive yield and total return potential relative to asset and interest coverage and relative to other securities with comparable risk.

BAUCHY = ICE BofAML US Corporate and High Yield (IUC0) BAUHY2 = ICE BofAML U.S. High Yield II

Organization: Brandywine Global Investment Management, LLC (the "Firm") is a wholly owned, independently operated, subsidiary of Franklin Resources, Inc. Brandywine Global Investment Management, LLC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Brandywine Global Investment Management, LLC has been independently verified for the periods January 1, 1993 through June 30, 2021. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request. Disclosed total firm assets represent the total market value of all discretionary and nondiscretionary, fee-paying and non-fee-paying assets under the Firm's management. GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein. ?1 Composite Description: The Corporate Credit Composite (the "Composite") Inception date: September 30, 2002. Creation date: April 1, 2015. The Composite is comprised of discretionary non-fee and fee paying non-wrap accounts with a market value over \$10M managed according to the firm's Corporate Credit income strategy. The strategy's investment objective is to provide an attractive cash distribution and total return greater than the current rate of inflation, while minimizing the risk of a current loss of capital over a five-year time horizon. The strategy generally invests in investment grade and below-investment grade (high yield) corporate bonds and will typically maintain an effective duration of less than five. The Corporate Credit Composite was previously managed by the Corporate Credit team at Diamond Hill Capital Management. On August 1st, 2021, Diamond Hill Capital Management sold the line of business that included the Corporate Credit team to Brandywine Global Investment Management. Composite activity prior to August 1st, 2021 is from the prior firm. ?1 Primary Benchmark Description: The ICE BofA U.S. Corporate & High Yield Index is the primary benchmark. This index is comprised of U.S. dollar denominated investment grade and below investment grade corporate debt publicly issued in the U.S. domestic market. ?1 Secondary Benchmark Description: The ICE BofAML US High Yield Index tracks the performance of USD denominated below investment grade corporate debt publicly issued in the major domestic markets. ?1 Performance Calculation: Preliminary data, if so noted, reflects unreconciled data for the most recent reporting period. Portfolios are valued daily on a trade date basis and include dividends and interest as well as all realized and unrealized capital gains and losses. Return calculations at the portfolio level are time-weighted to account for periodic contributions and withdrawals. Performance results are calculated on a before tax, total return basis. The Composite returns consist of size-weighted portfolio returns using beginning of period values to weight the portfolio returns. Monthly linking of interim performance results is used to calculate quarterly and annual returns. Composite's valuations and returns are computed in U.S. Dollars ("USD"). The results are presented in USD or in other currencies (to accommodate overseas investors), the latter by converting monthly USD returns into other currency returns using the appropriate currency exchange rate returns. Gross returns reflect the deduction of trading expenses. Net of fee returns reflect the deduction of trading expenses and the highest investment management fees charged within the composite membership as stated in the fee schedule below. Composite dispersion is calculated using the asset-weighted standard deviation method for all portfolios that were in the Composite for the entire year. Composite dispersion is not presented for periods with five or fewer portfolios. The number of accounts and market values are as of the end of the period. The three-year annualized standard deviation, calculated using gross-of-fee returns, measures the variability of the composite and the benchmark returns over the preceding 36-month period. Gross-of-fee returns are used to calculate the presented risk measures. A complete list of composites, and limited distribution pooled funds descriptions as well as a list of broad distribution pooled funds is available upon request. ?1 Fee Schedule: Institutional Client Separate Account Management Fee Schedule: 0.55% on the first \$50 million; 0.45% on any portion of assets in excess of \$50 million. Please note, fee prior to 02/28/2015 was zero. Additional information on the Firm's fee schedule can be found in Form ADV Part 2A which is available upon request ?1

Disclosures

BAUCHY = ICE BofA U.S. Corporate & High Yield Index

- 1 The data represent the aggregate characteristics of all securities held in the respective Representative Portfolio, an actual commission account not subject to taxation, and are included for informational purposes only. The Portfolio Characteristics of any particular account may vary based on any investment restrictions applicable to that account.
- 2 Supplemental Information to the attached Corporate Credit GIPS composite presentation.
- 3 The "Average Quality" is determined by assigning numerical scores to each credit rating and calculating a weighted average for the securities held in the portfolio. The numeric score calculated for the entire portfolio is then converted back into the corresponding credit rating. Individual security ratings are determined by using the middle rating from the three major NRSROs (S & P, Moody's, and Fitch) assigned to each security. In the event that ratings are provided by only two agencies, the lowest rating will be assigned. If only one agency assigns a rating, that rating will be applied. If the security is not rated by one of the three major agencies, U.S. treasuries and certain U.S. agencies are given the U.S. issuer rating. Sovereign treasuries are given the sovereign issuer rating. All other unrated securities are given a rating equivalent to a defaulted bond. Cash is included and receives the highest rating.
