U.S. High Yield
Strategy Profile

OBJECTIVE
We strive to provide an attractive total return by seeking to generate a high level of income and modest capital gains, while attempting to protect against inflation. Over a complete economic cycle of several years, we seek to outperform the high yield benchmark, on an average annual basis, by more than one percentage point net of fees.

UNIVERSE
High yield corporate bond issuers generally rated below BBB- or Baa3 by at least one rating agency. On occasion, the strategy will invest in unrated securities deemed to be of comparable quality. We may also invest, to limited degrees and dependent on client guidelines, in investment-grade corporate bonds, preferred stock, and convertible securities.

INVESTMENT PROCESS SUMMARY
Summary
We apply our top-down global fixed income process when structuring high yield portfolios. The top-down process establishes the cyclical quality bias of the portfolio. This macroeconomic perspective is combined and incorporated with our quantitative screens and fundamental analysis when constructing high yield portfolios. The cheapness of individual sectors and issuers is determined using these quantitative and qualitative credit tools. The subsequent portfolio will generally consist of 50 to 100 high yield corporate bonds that we believe to be undervalued by the credit markets.

Quantitative Screens
Based on our proprietary quantitative deselection screen, we aim to identify those sectors and issuers that offer greater yield and return than the index with lower comparable risk. Our quantitative deselection screen identifies those sectors and issuers based on a number of factors, including (i) sector economics and risks; (ii) yield and option-adjusted spread analysis; and (iii) the probability of credit default or coercive restructuring.

Fundamental Analysis
We believe that fundamental research is critical to constructing a portfolio that will outperform its representative index. We focus on identifying those issuers based on their future ability to provide a better than index yield and total return. We analyze the (i) quality of a company’s earnings in relation to management’s goals and risk tolerance, (ii) specific issuer bond covenants, (iii) position of an issue within the capital structure, and (iv) value and range of a firm’s assets across the respective capital structure.

SELL DISCIPLINE
We follow a disciplined approach to sell decisions, with issues sold for two primary reasons—valuation and fundamental deterioration. An issue is typically sold as it approaches our yield target and/or another more compelling investment opportunity arises. Alternatively, an issue may also be sold when the initial thesis supporting the investment is no longer valid, and we believe significant downside is likely.

OUR COMPETITIVE ADVANTAGE
The strategy seeks the best high yield opportunities around the U.S. while applying a disciplined macro-driven approach to risk management. Fundamental research and quantitative screens are an integral part of the bottom-up security selection process while top-down decisions establish the portfolio’s quality and sector biases.
**AT A GLANCE**

- Primary Benchmark: Bloomberg Barclays U.S. Corporate High Yield Index or other high yield benchmark, as specified by client direction
- Portfolio construction combines the Global Fixed Income team macroeconomic strategy with the quantitative and fundamental sector and security selection analysis of the High Yield team
- Yield, option-adjusted spread, and expected total return adjusted for default probability are our primary measures of value
- Investments typically are concentrated in sectors and individual issuers that we believe offer the best total return potential
- Portfolios normally consist of 50 to 100 corporate domestic and foreign issuers with position sizes limited to 5% at purchase

BUSCHY = Bloomberg Barclays U.S. Corporate High Yield Index  BAUHY2 = BofA Merrill Lynch U.S. High Yield II Index

Organization: Brandywine Global Investment Management, LLC (the "Firm") is a wholly owned, independently operated, subsidiary of Legg Mason, Inc. The Firm has prepared and presented this report in compliance with the Global Investment Performance Standards (GIPS). For the periods July 1, 2000 through June 30, 2016, the Firm has been verified by Kresser Miller. A verification includes assessing whether the Firm (1) complied with the composite construction requirements of the GIPS on a firm-wide basis, and (2) designed and processes and procedures to calculate and present performance results in compliance with the GIPS standards. A copy of the verification report is available upon request. Disclosed net total firm assets represent the total market value of all discretionary and non-discretionary, fee-paying and non-fee-paying assets under the Firm’s management. Composite Description: The U.S. High Yield Composite (the “Composite”) Inception Date: January 1, 2010. Creation Date: January 1, 2010. The Composite (formerly known as the “High Yield Composite”) includes all fully discretionary, fee-paying, actively managed U.S. High Yield Non-Constrained accounts with no composite minimums. The holdings consist of high-yielding instruments primarily issued in the United States that Brandywine believes are going to produce a high level of current income and capital appreciation. The portfolios are typically invested in 50-100 securities. Effective 6/30/16, the composite name was changed from High Yield. Benchmark: The Bloomberg Barclays Capital U.S. Corporate Yield Index covers the universe of fixed rate, non-investment grade debt. Eurobonds and debt issues from countries designated as emerging markets (e.g., Argentina, Brazil, Venezuela, etc.) are excluded, but Canadian and global bonds (SEC registered) of issuers in non-EMS countries are included. Original issue zeroes, step-up coupon structures, 144-As and pay-in-kind bonds (PIKs, as of October 1, 2009) are also included. The BofA Merrill Lynch US High Yield Index tracks the performance of USD denominated below investment grade corporate debt publicly issued in the major domestic markets. Performance Calculation: Preliminary data, if so noted, reflects unacknowledged data for the most recent reporting period. Portfolios are valued daily on a trade date basis and include dividends and interest as well as all realized and unrealized capital gains and losses. Return calculations at the portfolio level are time-weighted to account for periodic contributions and withdrawals. Performance results are calculated on a before tax, total return basis. The Composite returns consist of size-weighted portfolio returns using beginning of period values to weight the portfolio returns. Monthly linking of interim performance results is used to calculate quarterly and annual returns. Composite’s valuations and returns are computed in U.S. Dollars (“USD”). The results are presented in USD or in other currencies (to accommodate overseas investors), the latter by converting monthly USD returns into other currency returns using the appropriate currency exchange rate returns. Gross returns reflect the deduction of trading expenses. Net of fee returns reflect the deduction of trading expenses and the highest investment management fees charged within the composite membership as stated in the fee schedule below. Composite dispersion is calculated using the asset-weighted standard deviation method for all portfolios that were in the Composite for the entire year. Composite dispersion is not presented for periods with five or fewer portfolios. A complete list describing the Firm’s composites as well as any additional information regarding the Firm’s policies for calculating and reporting performance results is available upon request. Fee Schedule: Institutional Client Separate Account Management Fee
